Pictet CH - LPP 25 - I dy CHF

INVESTMENT OVERVIEW

Objective
To increase the value of your investment over the medium term, while demonstrating superior environmental, social and governance (ESG) characteristics to the benchmark.
Reference Index
Pictet LPP 2000 / LPP-25 (CHF), an index that does not take ESG factors into account.
Portfolio Assets
The fund invests primarily in equities (approximately 25% of assets under management) and bonds, including through investments in other funds, without geographical restrictions.
Investment Process
In actively managing the fund, the manager relies on market analysis and fundamental analysis of companies in order to adapt the allocation between asset classes and to build a portfolio offering an attractive risk-adjusted return, while taking into account the Occupational pensions act (LPP). The manager excludes companies that generate a significant portion of their revenues from activities deemed incompatible with Pictet Asset Management's responsible investment principles, such as thermal coal, tobacco and controversial weapons. It also seeks to select and overweight investments with a high ESG profile. The manager also works to influence companies on material sustainability issues.

Past performance may not be a reliable guide to future performance. All forms of investment involve risk. The value of investments and the income derived from them is not guaranteed and it can fall as well as rise and you may not get back the original amount invested. Please refer to the Risk Considerations and to the prospectus for more information.

RISK CONSIDERATIONS

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. This product may be exposed to further risks that are not included in the Summary Risk Indicator, for example:

- Currency risk: where your reference currency differs from the currency of the share class, you will receive payments in a different currency, so the final return you will get depends on the exchange rate between the reference currency and your local currency.
- Financial derivatives risk: the leverage resulting from derivatives amplifies losses in certain market conditions.
- Sustainability risk: the risk arising from any environmental, social or governance events or conditions that, were they to occur, could cause a material negative impact on the value of the investment.

Further information can be found in the prospectus. This product does not include any protection from future market performance so you could lose some or all of your investment.

FINANCIAL GLOSSARY

Alpha
Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.

Beta
Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.

Conversion fee
Fee paid for the transfer of shares of one unit/share class to another unit/share class.

Correlation
Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation.

Standard deviation and annualised volatility
Annualised volatility is a risk indicator showing the extent of the price fluctuations of a security or fund unit compared to its average price over a given period. The higher the volatility, the greater the fluctuations.

Inception date
The inception date is the date taken into account for the start of performance calculation. It corresponds to the launch date.

Information ratio
The information ratio is a way of measuring the value added by the portfolio manager relative to a benchmark. It is a measure of the risk-adjusted return of a portfolio and is calculated by dividing the active return (portfolio return minus benchmark return) by the tracking error.

Launch date
The launch date is the date when the sub-fund was activated in its current legal status.

NAV
An acronym of net asset value.

Order deadline
Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.

Sharpe ratio
The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.

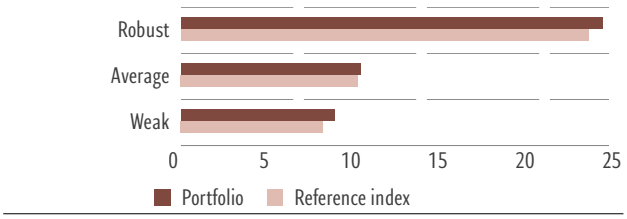

Tracking error
Tracking error shows the standard deviation of the active returns (portfolio return minus benchmark return). It measures how close a fund return is to its benchmark return.

Ongoing Costs
The ongoing charges figure is based on expenses for the last 12 months. This figure may vary from year to year. It includes the management fees and other administrative or operating costs. It excludes performance fees and portfolio transaction costs, except in the case of an entry/exit charge paid by the Compartment when buying or selling units/shares in another collective investment undertaking. For funds created less than 12 months ago, future costs are estimated.

SRI
The Summary Risk Indicator (SRI) is defined by the PRIIPs regulation and is designed to show the relative risk of a product, using a combination of market and credit risk measures.
